

Cuisine-Specific Effects of Dining & Cultural Practices (Model Pr

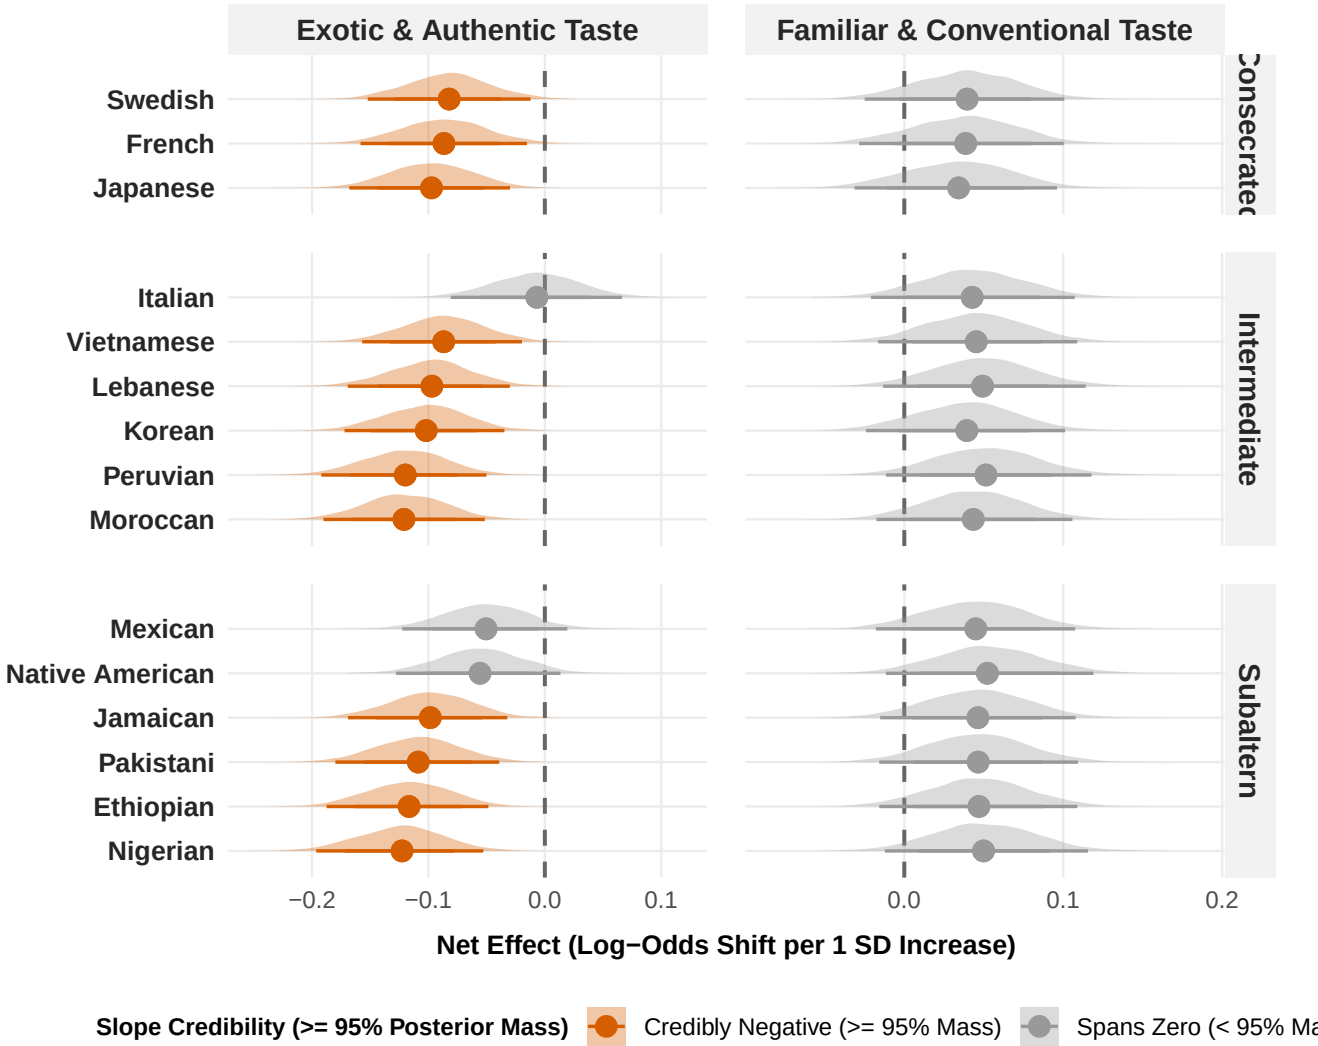

Net slope estimates (Global Fixed Effect + Cuisine-Specific Random Deviation u1) grouped
Ordered by Adult Highbrow Arts Attendance effect

Hierarchical ACAT model with cuisine-level crossed random slopes (4,000 MCMC draws).
Color classified by $\geq 95\%$ posterior probability mass on either side of zero.
Cuisines grouped into baseline consecration tiers and ordered by median slope within each tier.

Cuisine-Specific Effects of Taste Dispositions (Model Dispositions)

Net slope estimates (Global Fixed Effect + Cuisine-Specific Random Deviation u1) grouped by Consecration Tier
Ordered by Exotic & Authentic Taste effect

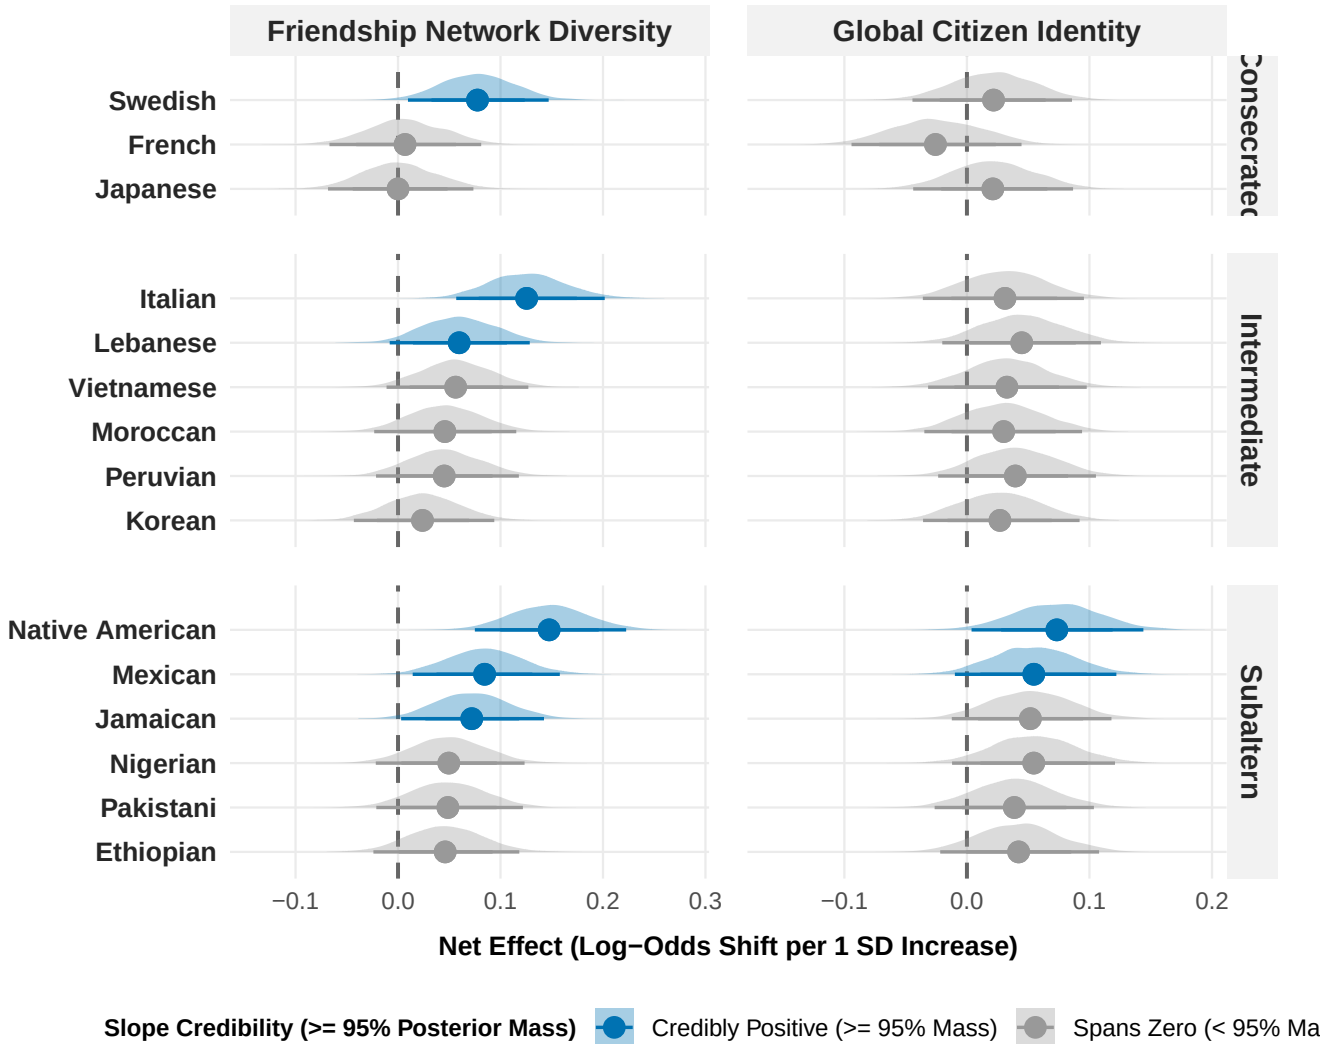

Hierarchical ACAT model with cuisine-level crossed random slopes (4,000 MCMC draws).

Color classified by $\geq 95\%$ posterior probability mass on either side of zero.

Cuisines grouped into baseline consecration tiers and ordered by median slope within each tier.

Cuisine-Specific Effects of Cosmopolitan Capital & Networks (Model 1)

Net slope estimates (Global Fixed Effect + Cuisine-Specific Random Deviation u_1) grouped by Friendship Network Diversity effect
Ordered by Friendship Network Diversity effect

Hierarchical ACAT model with cuisine-level crossed random slopes (4,000 MCMC draws).

Color classified by $\geq 95\%$ posterior probability mass on either side of zero.

Cuisines grouped into baseline consecration tiers and ordered by median slope within each tier.
